

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

Glencoe/McGraw-Hill

**Chemistry: Matter and Change © 2008**

**Chapter Title:** Chapter 1 Introduction to Chemistry

**Chapter Question:** How is chemistry a science that is central to our lives?

Chapter Overview Template	
<b>Content Area:</b> Science	
<b>Target Course/Grade Level:</b> Science Grades 10-12	
<b>21<sup>st</sup> Century Themes</b> Global Awareness	
<b>21<sup>st</sup> Century Skills</b> Creativity and Innovation – Critical Thinking and Problem Solving – Communication and Collaboration – Information Literacy Media Literacy – ICTY Literacy – Life and Career skills	
Learning Targets	
<b>Standard: 5.1 Science Practices:</b> All students will understand that science is both a body of knowledge and an evidence-based, model-building enterprise that continually extends, refines, and revises knowledge. The four Science Practices strands encompass the knowledge and reasoning skills that students must acquire to be proficient in science.	
<b>Strand: A. Understand Scientific Explanations:</b> Students understand core concepts and principles of science and use measurement and observation tools to assist in categorizing, representing, and interpreting the natural and designed world.	
CPI #	Cumulative Progress Indicator (CPI)
<b>Content Statement:</b> Mathematical, physical, and computational tools are used to search for and explain core scientific concepts and principles.	
<b>5.1.12.A.1</b> Section #1.3, #1.4 SE: 13, 21 <i>ChemLab 24</i> <i>Launch Lab 3</i>	Refine interrelationships among concepts and patterns of evidence found in different central scientific explanations.
<b>Content Statement:</b> Interpretation and manipulation of evidence-based models are used to build and critique arguments/explanations.	
<b>5.1.12.A.2</b> <i>ChemLab 24</i> <i>Launch Lab 3</i>	Develop and use mathematical, physical, and computational tools to build evidence-based models and to pose theories.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

**ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS**

<b>Content Statement:</b> Revisions of predictions and explanations are based on systematic observations, accurate measurements, and structured data/evidence.	
<b>5.1.12.A.3</b> <i>ChemLab 24</i>	Use scientific principles and theories to build and refine standards for data collection, posing controls, and presenting evidence.
<b>Strand: B. Generate Scientific Evidence Through Active Investigations:</b> Students master the conceptual, mathematical, physical, and computational tools that need to be applied when constructing and evaluating claims.	
<b>Content Statement:</b> Logically designed investigations are needed in order to generate the evidence required to build and refine models and explanations.	
<b>5.1.12.B.1</b> Section #1.3, #1.4 SE: 12-15, 21 <i>ChemLab 24</i> <i>Launch Lab 3</i>	Design investigations, collect evidence, analyze data, and evaluate evidence to determine measures of central tendencies, causal/correlational relationships, and anomalous data.
<b>Content Statement:</b> Mathematical tools and technology are used to gather, analyze, and communicate results.	
<b>5.1.12.B.2</b> <i>ChemLab 24</i> <i>Launch Lab 3</i>	Build, refine, and represent evidence-based models using mathematical, physical, and computational tools.
<b>Content Statement:</b> Empirical evidence is used to construct and defend arguments.	
<b>5.1.12.B.3</b> Section #1.3, #1.4 SE: 13, 21 <i>ChemLab 24</i>	Revise predictions and explanations using evidence, and connect explanations/arguments to established scientific knowledge, models, and theories.
<b>Content Statement:</b> Scientific reasoning is used to evaluate and interpret data patterns and scientific conclusions.	
<b>5.1.12.B.4</b> Section #1.3, #1.4 SE: 13, 21 <i>ChemLab 24</i> <i>Launch Lab 3</i>	Develop quality controls to examine data sets and to examine evidence as a means of generating and reviewing explanations.
<b>Strand: C. Reflect on Scientific Knowledge:</b> Scientific knowledge builds on itself over time.	
<b>Content Statement:</b> Refinement of understandings, explanations, and models occurs as new evidence is incorporated.	
<b>5.1.12.C.1</b> Section #1.1, #1.3, #1.4 SE: 5-8, 13, 20-21 <i>ChemLab 24</i>	Reflect on and revise understandings as new evidence emerges.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Content Statement:</b> Data and refined models are used to revise predictions and explanations.	
<b>5.1.12.C.2</b> Section #1.1, #1.4 SE: 5-8, 20-21 <i>ChemLab 24</i>	Use data representations and new models to revise predictions and explanations.
<b>Content Statement:</b> Science is a practice in which an established body of knowledge is continually revised, refined, and extended as new evidence emerges.	
<b>5.1.12.C.3</b> <i>ChemLab 24</i> <i>Launch Lab 3</i>	Consider alternative theories to interpret and evaluate evidence-based arguments.
<b>Strand: D. Participate Productively in Science:</b> The growth of scientific knowledge involves critique and communication, which are social practices that are governed by a core set of values and norms.	
<b>Content Statement:</b> Science involves practicing productive social interactions with peers, such as partner talk, whole-group discussions, and small-group work.	
<b>5.1.12.D.1</b> <i>ChemLab 24</i>	Engage in multiple forms of discussion in order to process, make sense of, and learn from others' ideas, observations, and experiences.
<b>Content Statement:</b> Science involves using language, both oral and written, as a tool for making thinking public.	
<b>5.1.12.D.2</b> <i>ChemLab 24</i>	Represent ideas using literal representations, such as graphs, tables, journals, concept maps, and diagrams.
<b>Content Statement:</b> Ensure that instruments and specimens are properly cared for and that animals, when used, are treated humanely, responsibly, and ethically.	
<b>5.1.12.D.3</b> Section #1.4 SE: 19 <i>Launch Lab 3</i>	Demonstrate how to use scientific tools and instruments and knowledge of how to handle animals with respect for their safety and welfare.
<b>Essential Questions:</b> <ul style="list-style-type: none"><li>• Why study chemistry?</li><li>• What is the relationship between branches of chemistry and different kinds of matter?</li><li>• How do scientists use scientific methods?</li><li>• How can scientific research result in the development of technology that can improve our lives and the world around us?</li></ul>

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Standard: 5.2 Physical Science:</b> All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.	
<b>Strand: A. Properties of Matter:</b> All objects and substances in the natural world are composed of matter. Matter has two fundamental properties: matter takes up space, and matter has inertia.	
CPI #	Cumulative Progress Indicator (CPI)
<b>Content Statement:</b> Electrons, protons, and neutrons are parts of the atom and have measurable properties, including mass and, in the case of protons and electrons, charge. The nuclei of atoms are composed of protons and neutrons. A kind of force that is only evident at nuclear distances holds the particles of the nucleus together against the electrical repulsion between the protons.	
<b>5.2.12.A.1</b> Section #4.2 SE: 106-114	Use atomic models to predict the behaviors of atoms in interactions.
<b>Content Statement:</b> In a neutral atom, the positively charged nucleus is surrounded by the same number of negatively charged electrons. Atoms of an element whose nuclei have different numbers of neutrons are called isotopes.	
<b>5.2.12.A.4</b> Section #4.3, #4.4 SE: 117, 122-124	Explain how the properties of isotopes, including half-lives, decay modes, and nuclear resonances, lead to useful applications of isotopes.
<b>Essential Questions: from the chapter opener pages</b> <ul style="list-style-type: none"><li>• What were early ideas about matter?</li><li>• How do you define an atom?</li><li>• How are atoms different?</li><li>• What is the relationship between unstable nuclei and radioactive decay?</li></ul>

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Strand: C. Reflect on Scientific Knowledge:</b> Scientific knowledge builds on itself over time.	
<b>Content Statement:</b> Refinement of understandings, explanations, and models occurs as new evidence is incorporated.	
<b>5.1.12.C.1</b> Section #5.2 SE: 146-155 <i>ChemLab 164</i> <i>Launch Lab 135</i>	Reflect on and revise understandings as new evidence emerges.
<b>Content Statement:</b> Data and refined models are used to revise predictions and explanations.	
<b>5.1.12.C.2</b> Section #5.2 SE: 146-155 <i>ChemLab 164</i> <i>Launch Lab 135</i>	Use data representations and new models to revise predictions and explanations.
<b>Content Statement:</b> Science is a practice in which an established body of knowledge is continually revised, refined, and extended as new evidence emerges.	
<b>5.1.12.C.3</b> Section #5.2 SE: 146-155 <i>Launch Lab 135</i>	Consider alternative theories to interpret and evaluate evidence-based arguments.
<b>Strand: D. Participate Productively in Science:</b> The growth of scientific knowledge involves critique and communication, which are social practices that are governed by a core set of values and norms.	
<b>Content Statement:</b> Science involves practicing productive social interactions with peers, such as partner talk, whole-group discussions, and small-group work.	
<b>5.1.12.D.1</b> <i>Launch Lab 135</i>	Engage in multiple forms of discussion in order to process, make sense of, and learn from others' ideas, observations, and experiences.
<b>Content Statement:</b> Science involves using language, both oral and written, as a tool for making thinking public.	
<b>5.1.12.D.2</b> Section #5.1 SE: 144 <i>Chemistry &amp; Health 163</i> <i>ChemLab 164</i>	Represent ideas using literal representations, such as graphs, tables, journals, concept maps, and diagrams.
<b>Content Statement:</b> Ensure that instruments and specimens are properly cared for and that animals, when used, are treated humanely, responsibly, and ethically.	
<b>5.1.12.D.3</b> Section #5.1 SE: 144 <i>ChemLab 164</i>	Demonstrate how to use scientific tools and instruments and knowledge of how to handle animals with respect for their safety and welfare.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

**Standard: 5.2 Physical Science:** All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.

**Strand: A. Properties of Matter:** All objects and substances in the natural world are composed of matter. Matter has two fundamental properties: matter takes up space, and matter has inertia.

CPI #	Cumulative Progress Indicator (CPI)
<b>Content Statement:</b> Electrons, protons, and neutrons are parts of the atom and have measurable properties, including mass and, in the case of protons and electrons, charge. The nuclei of atoms are composed of protons and neutrons. A kind of force that is only evident at nuclear distances holds the particles of the nucleus together against the electrical repulsion between the protons.	
<b>5.2.12.A.1</b> Section #5.2, #5.3 SE: 146-155, 156-162	Use atomic models to predict the behaviors of atoms in interactions.
<b>Strand: B. Changes in Matter:</b> Substances can undergo physical or chemical changes to form new substances. Each change involves energy.	
<b>Content Statement:</b> An atom's electron configuration, particularly of the outermost electrons, determines how the atom interacts with other atoms. Chemical bonds are the interactions between atoms that hold them together in molecules or between oppositely charged ions.	
<b>5.2.12.B.1</b> Section #5.3 SE: 161-162	Model how the outermost electrons determine the reactivity of elements and the nature of the chemical bonds they tend to form.
<b>Essential Questions:</b> <ul style="list-style-type: none"><li>• What are the characteristics of light?</li><li>• How do the properties of electrons help relate atomic emission spectra, energy states of atoms, and atomic orbitals?</li><li>• What rules can be used to determine electron arrangement in an atom?</li></ul>

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

**Strand: C. Forms of Energy:** Knowing the characteristics of familiar forms of energy, including potential and kinetic energy, is useful in coming to the understanding that, for the most part, the natural world can be explained and is predictable.

**Content Statement:** Heating increases the energy of the atoms composing elements and the molecules or ions composing compounds. As the kinetic energy of the atoms, molecules, or ions increases, the temperature of the matter increases. Heating a pure solid increases the vibrational energy of its atoms, molecules, or ions. When the vibrational energy of the molecules of a pure substance becomes great enough, the solid melts.

### 5.2.12.C.2

Section #7.2, #7.4

SE: 214-215, 226

Account for any trends in the melting points and boiling points of various compounds.

### Essential Questions:

- How are ions formed?
- How do charged ions form electrically neutral ionic compounds?
- How are ionic compounds represented by written names and formulas?
- What are properties and structure of metals?

**Strand: C. Forms of Energy:** Knowing the characteristics of familiar forms of energy, including potential and kinetic energy, is useful in coming to the understanding that, for the most part, the natural world can be explained and is predictable.

**Content Statement:** Heating increases the energy of the atoms composing elements and the molecules or ions composing compounds. As the kinetic energy of the atoms, molecules, or ions increases, the temperature of the matter increases. Heating a pure solid increases the vibrational energy of its atoms, molecules, or ions. When the vibrational energy of the molecules of a pure substance becomes great enough, the solid melts.

### 5.2.12.C.2

Section #8.1, #8.5

SE: 242, 269-270

Account for any trends in the melting points and boiling points of various compounds.

**Strand: D. Energy Transfer and Conservation:** The conservation of energy can be demonstrated by keeping track of familiar forms of energy as they are transferred from one object to another.

**Content Statement:** The driving forces of chemical reactions are energy and entropy. Chemical reactions either release energy to the environment (exothermic) or absorb energy from the environment (endothermic).

### 5.2.12.D.2

Section #8.1

SE: 247

Describe the potential commercial applications of exothermic and endothermic reactions.

### Essential Questions:

- Why do atoms form covalent bonds?
- What are the rules for naming binary molecular compounds, binary acids, and oxyacids?
- What information is conveyed by structural formulas?
- How is molecular shape determined?
- What determines the character of a chemical bond?

**Chapter Title: Chapter 9 Chemical Reactions**

**Chapter Question: What are some common chemical reactions occurring in the world around us?**

Chapter Overview Template	
<b>Content Area: Science</b>	
<b>Target Course/Grade Level: Science Grades 10-12</b>	
<b>21<sup>st</sup> Century Themes</b> <b>Global Awareness</b>	
<b>21<sup>st</sup> Century Skills</b> <b>Creativity and Innovation – Critical Thinking and Problem Solving – Communication and Collaboration – Information Literacy Media Literacy – ICTY Literacy – Life and Career skills</b>	
Learning Targets	
<b>Standard: 5.1 Science Practices:</b> All students will understand that science is both a body of knowledge and an evidence-based, model-building enterprise that continually extends, refines, and revises knowledge. The four Science Practices strands encompass the knowledge and reasoning skills that students must acquire to be proficient in science.	
<b>Strand: A. Understand Scientific Explanations:</b> Students understand core concepts and principles of science and use measurement and observation tools to assist in categorizing, representing, and interpreting the natural and designed world.	
CPI #	Cumulative Progress Indicator (CPI)
<b>Content Statement:</b> Mathematical, physical, and computational tools are used to search for and explain core scientific concepts and principles.	
<b>5.1.12.A.1</b> Section #9.2 SE: 294 <i>ChemLab</i> 310 <i>Launch Lab</i> 281	Refine interrelationships among concepts and patterns of evidence found in different central scientific explanations.
<b>Content Statement:</b> Interpretation and manipulation of evidence-based models are used to build and critique arguments/explanations.	
<b>5.1.12.A.2</b> Section #9.2 SE: 294 <i>ChemLab</i> 310 <i>Launch Lab</i> 281	Develop and use mathematical, physical, and computational tools to build evidence-based models and to pose theories.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Content Statement:</b> Revisions of predictions and explanations are based on systematic observations, accurate measurements, and structured data/evidence.	
<b>5.1.12.A.3</b> <i>ChemLab 310</i> <i>Launch Lab 281</i>	Use scientific principles and theories to build and refine standards for data collection, posing controls, and presenting evidence.
<b>Strand: B. Generate Scientific Evidence Through Active Investigations:</b> Students master the conceptual, mathematical, physical, and computational tools that need to be applied when constructing and evaluating claims.	
<b>Content Statement:</b> Logically designed investigations are needed in order to generate the evidence required to build and refine models and explanations.	
<b>5.1.12.B.1</b> Section #9.2 SE: 294 <i>ChemLab 310</i> <i>Launch Lab 281</i>	Design investigations, collect evidence, analyze data, and evaluate evidence to determine measures of central tendencies, causal/correlational relationships, and anomalous data.
<b>Content Statement:</b> Mathematical tools and technology are used to gather, analyze, and communicate results.	
<b>5.1.12.B.2</b> Section #9.2 SE: 294 <i>ChemLab 310</i>	Build, refine, and represent evidence-based models using mathematical, physical, and computational tools.
<b>Content Statement:</b> Empirical evidence is used to construct and defend arguments.	
<b>5.1.12.B.3</b> Section #9.2 SE: 294 <i>ChemLab 310</i> <i>Launch Lab 281</i>	Revise predictions and explanations using evidence, and connect explanations/arguments to established scientific knowledge, models, and theories.
<b>Content Statement:</b> Scientific reasoning is used to evaluate and interpret data patterns and scientific conclusions.	
<b>5.1.12.B.4</b> Section #9.2 SE: 294 <i>ChemLab 310</i>	Develop quality controls to examine data sets and to examine evidence as a means of generating and reviewing explanations.

<b>Strand: C. Reflect on Scientific Knowledge:</b> Scientific knowledge builds on itself over time.	
<b>Content Statement:</b> Refinement of understandings, explanations, and models occurs as new evidence is incorporated.	
<b>5.1.12.C.1</b> Section #9.2 SE: 294 <i>ChemLab 310</i> <i>Launch Lab 281</i>	Reflect on and revise understandings as new evidence emerges.
<b>Content Statement:</b> Data and refined models are used to revise predictions and explanations.	
<b>5.1.12.C.2</b> Section #9.2 SE: 294 <i>ChemLab 310</i>	Use data representations and new models to revise predictions and explanations.
<b>Content Statement:</b> Science is a practice in which an established body of knowledge is continually revised, refined, and extended as new evidence emerges.	
<b>5.1.12.C.3</b> <i>ChemLab 310</i>	Consider alternative theories to interpret and evaluate evidence-based arguments.
<b>Strand: D. Participate Productively in Science:</b> The growth of scientific knowledge involves critique and communication, which are social practices that are governed by a core set of values and norms.	
<b>Content Statement:</b> Science involves using language, both oral and written, as a tool for making thinking public.	
<b>5.1.12.D.2</b> Section #9.2 SE: 294 <i>ChemLab 310</i> <i>How It Works 309</i>	Represent ideas using literal representations, such as graphs, tables, journals, concept maps, and diagrams.
<b>Content Statement:</b> Ensure that instruments and specimens are properly cared for and that animals, when used, are treated humanely, responsibly, and ethically.	
<b>5.1.12.D.3</b> Section #9.3 SE: 301 <i>ChemLab 310</i> <i>Launch Lab 281</i>	Demonstrate how to use scientific tools and instruments and knowledge of how to handle animals with respect for their safety and welfare.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Standard: 5.2 Physical Science:</b> All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.	
<b>Strand: A. Properties of Matter:</b> All objects and substances in the natural world are composed of matter. Matter has two fundamental properties: matter takes up space, and matter has inertia.	
<b>CPI #</b>	<b>Cumulative Progress Indicator (CPI)</b>
<b>Content Statement:</b> In the Periodic Table, elements are arranged according to the number of protons (the atomic number). This organization illustrates commonality and patterns of physical and chemical properties among the elements.	
<b>5.2.12.A.3</b> Section #9.2 SE: 294	Predict the placement of unknown elements on the Periodic Table based on their physical and chemical properties.
<b>Content Statement:</b> Solids, liquids, and gases may dissolve to form solutions. When combining a solute and solvent to prepare a solution, exceeding a particular concentration of solute will lead to precipitation of the solute from the solution. Dynamic equilibrium occurs in saturated solutions. Concentration of solutions can be calculated in terms of molarity, molality, and percent by mass.	
<b>5.2.12.A.5</b> Section #9.3 SE: 299-300	Describe the process by which solutes dissolve in solvents.
<b>Strand: B. Changes in Matter:</b> Substances can undergo physical or chemical changes to form new substances. Each change involves energy.	
<b>CPI #</b>	<b>Cumulative Progress Indicator (CPI)</b>
<b>Content Statement:</b> A large number of important reactions involve the transfer of either electrons or hydrogen ions between reacting ions, molecules, or atoms. In other chemical reactions, atoms interact with one another by sharing electrons to create a bond.	
<b>5.2.12.B.2</b> <i>How It Works</i> 309	Describe oxidation and reduction reactions, and give examples of oxidation and reduction reactions that have an impact on the environment, such as corrosion and the burning of fuel.
<b>Content Statement:</b> The conservation of atoms in chemical reactions leads to the ability to calculate the mass of products and reactants using the mole concept.	
<b>5.2.12.B.3</b> Section #9.1, #9.2, #9.3 SE: 285-288, 295, 297, 301 <i>ChemLab</i> 310	Balance chemical equations by applying the law of conservation of mass.

<b>CPI #</b>	<b>Cumulative Progress Indicator (CPI)</b>
<b>Content Statement:</b> Differences in the physical properties of solids, liquids, and gases are explained by the ways in which the atoms, ions, or molecules of the substances are arranged, and by the strength of the forces of attraction between the atoms, ions, or molecules.	
<b>5.2.12.A.2</b> Section #12.1, #12.2, #12.3 SE: 402-406, 411-414, 415-424 <i>ChemLab 432</i> <i>Everyday Chemistry</i> 431 <i>Launch Lab 401</i>	Account for the differences in the physical properties of solids, liquids, and gases.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Strand: C. Forms of Energy:</b> Knowing the characteristics of familiar forms of energy, including potential and kinetic energy, is useful in coming to the understanding that, for the most part, the natural world can be explained and is predictable.	
<b>CPI #</b>	<b>Cumulative Progress Indicator (CPI)</b>
<b>Content Statement:</b> Gas particles move independently and are far apart relative to each other. The behavior of gases can be explained by the kinetic molecular theory. The kinetic molecular theory can be used to explain the relationship between pressure and volume, volume and temperature, pressure and temperature, and the number of particles in a gas sample. There is a natural tendency for a system to move in the direction of disorder or entropy.	
<b>5.2.12.C.1</b> Section #12.1, #12.2, #12.3 SE: 402-406, 408-409, 411-414, 415-424 <i>ChemLab 432</i>	Use the kinetic molecular theory to describe and explain the properties of solids, liquids, and gases.
<b>Content Statement:</b> Heating increases the energy of the atoms composing elements and the molecules or ions composing compounds. As the kinetic energy of the atoms, molecules, or ions increases, the temperature of the matter increases. Heating a pure solid increases the vibrational energy of its atoms, molecules, or ions. When the vibrational energy of the molecules of a pure substance becomes great enough, the solid melts.	
<b>5.2.12.C.2</b> Section #12.4 SE: 425-427 <i>ChemLab 432</i>	Account for any trends in the melting points and boiling points of various compounds.
<b>Essential Questions:</b> <ul style="list-style-type: none"><li>• How do the properties of gases relate to the arrangement of their particles?</li><li>• What determines a substance's state at a given temperature?</li><li>• How are particles arranged in solids and liquids?</li><li>• What happens to matter when energy is added or removed?</li></ul>

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Standard: 5.2 Physical Science:</b> All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.	
<b>Strand: A. Properties of Matter:</b> All objects and substances in the natural world are composed of matter. Matter has two fundamental properties: matter takes up space, and matter has inertia.	
CPI #	Cumulative Progress Indicator (CPI)
<b>Content Statement:</b> Solids, liquids, and gases may dissolve to form solutions. When combining a solute and solvent to prepare a solution, exceeding a particular concentration of solute will lead to precipitation of the solute from the solution. Dynamic equilibrium occurs in saturated solutions. Concentration of solutions can be calculated in terms of molarity, molality, and percent by mass.	
<b>5.2.12.A.5</b> Section #14.3 SE: 489-492 <i>ChemLab 506</i> <i>Launch Lab 475</i>	Describe the process by which solutes dissolve in solvents.
<b>Strand: D. Energy Transfer and Conservation:</b> The conservation of energy can be demonstrated by keeping track of familiar forms of energy as they are transferred from one object to another.	
CPI #	Cumulative Progress Indicator (CPI)
<b>Content Statement:</b> The driving forces of chemical reactions are energy and entropy. Chemical reactions either release energy to the environment (exothermic) or absorb energy from the environment (endothermic).	
<b>5.2.12.D.2</b> <i>Launch Lab 475</i>	Describe the potential commercial applications of exothermic and endothermic reactions.
<b>Essential Questions:</b> <ul style="list-style-type: none"><li>• How are mixtures classified?</li><li>• How is concentration expressed?</li><li>• What factors affect the formation of solutions?</li><li>• What are colligative properties?</li></ul>

<b>Strand: D. Energy Transfer and Conservation:</b> The conservation of energy can be demonstrated by keeping track of familiar forms of energy as they are transferred from one object to another.	
<b>Content Statement:</b> The potential energy of an object on Earth's surface is increased when the object's position is changed from one closer to Earth's surface to one farther from Earth's surface.	
<b>5.2.12.D.1</b> Section #15.1 SE: 516-517	Model the relationship between the height of an object and its potential energy.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

**Content Statement:** The driving forces of chemical reactions are energy and entropy. Chemical reactions either release energy to the environment (exothermic) or absorb energy from the environment (endothermic).

### 5.2.12.D.2

Section #15.2, #15.3

SE: 525-528, 533

*ChemLab* 550

*How It Works* 549

*Launch Lab* 515

Describe the potential commercial applications of exothermic and endothermic reactions.

### Essential Questions:

- What are the characteristics of energy?
- How is the enthalpy change calculated for a chemical reaction?
- How are thermochemical equations written?
- What is Hess's law?
- How can changes in enthalpy and entropy be used to determine whether a reaction is spontaneous?

<b>Strand: C. Reflect on Scientific Knowledge:</b> Scientific knowledge builds on itself over time.	
<b>Content Statement:</b> Refinement of understandings, explanations, and models occurs as new evidence is incorporated.	
<b>5.1.12.C.1</b> Section #16.1, #16.2 SE: 566, 571 <i>ChemLab 584</i> <i>Launch Lab 559</i>	Reflect on and revise understandings as new evidence emerges.
<b>Content Statement:</b> Data and refined models are used to revise predictions and explanations.	
<b>5.1.12.C.2</b> Section #16.1, #16.2 SE: 566, 571 <i>ChemLab 584</i> <i>Launch Lab 559</i>	Use data representations and new models to revise predictions and explanations.
<b>Content Statement:</b> Science is a practice in which an established body of knowledge is continually revised, refined, and extended as new evidence emerges.	
<b>5.1.12.C.3</b> Section #16.1 SE: 566 <i>ChemLab 584</i>	Consider alternative theories to interpret and evaluate evidence-based arguments.
<b>Strand: D. Participate Productively in Science:</b> The growth of scientific knowledge involves critique and communication, which are social practices that are governed by a core set of values and norms.	
<b>Content Statement:</b> Science involves practicing productive social interactions with peers, such as partner talk, whole-group discussions, and small-group work.	
<b>5.1.12.D.1</b> <i>ChemLab 584</i>	Engage in multiple forms of discussion in order to process, make sense of, and learn from others' ideas, observations, and experiences.
<b>Content Statement:</b> Science involves using language, both oral and written, as a tool for making thinking public.	
<b>5.1.12.D.2</b> <i>ChemLab 584</i> <i>Launch Lab 559</i>	Represent ideas using literal representations, such as graphs, tables, journals, concept maps, and diagrams.
<b>Content Statement:</b> Ensure that instruments and specimens are properly cared for and that animals, when used, are treated humanely, responsibly, and ethically.	
<b>5.1.12.D.3</b> Section #16.2 SE: 571 <i>ChemLab 584</i> <i>Launch Lab 559</i>	Demonstrate how to use scientific tools and instruments and knowledge of how to handle animals with respect for their safety and welfare.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

**Standard: 5.2 Physical Science:** All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.

**Strand: D. Energy Transfer and Conservation:** The conservation of energy can be demonstrated by keeping track of familiar forms of energy as they are transferred from one object to another.

**CPI #**

**Cumulative Progress Indicator (CPI)**

**Content Statement:** Chemical equilibrium is a dynamic process that is significant in many systems, including biological, ecological, environmental, and geological systems. Chemical reactions occur at different rates. Factors such as temperature, mixing, concentration, particle size, and surface area affect the rates of chemical reactions.

**5.2.12.D.5**

Section #16.1, #16.2

SE: 560-566,  
568-573

*Chemistry & Health*  
583

*ChemLab* 584

*Launch Lab* 559

Model the change in rate of a reaction by changing a factor.

**Essential Questions:**

- Why are some chemical reactions faster than others?
- What factors affect the rate of a chemical reaction?
- What is the reaction rate law?
- How does the reaction mechanism determine the rate of the overall chemical reaction?

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<b>Content Statement:</b> Science is a practice in which an established body of knowledge is continually revised, refined, and extended as new evidence emerges.	
<b>5.1.12.C.3</b> <i>ChemLab 776</i> <i>Launch Lab 743</i>	Consider alternative theories to interpret and evaluate evidence-based arguments.
<b>Strand: D. Participate Productively in Science:</b> The growth of scientific knowledge involves critique and communication, which are social practices that are governed by a core set of values and norms.	
<b>Content Statement:</b> Science involves using language, both oral and written, as a tool for making thinking public.	
<b>5.1.12.D.2</b> <i>How It Works 775</i>	Represent ideas using literal representations, such as graphs, tables, journals, concept maps, and diagrams.
<b>Content Statement:</b> Ensure that instruments and specimens are properly cared for and that animals, when used, are treated humanely, responsibly, and ethically.	
<b>5.1.12.D.3</b> Section #21.3 SE: 763 <i>ChemLab 776</i> <i>Launch Lab 743</i>	Demonstrate how to use scientific tools and instruments and knowledge of how to handle animals with respect for their safety and welfare.
<b>Standard: 5.2 Physical Science:</b> All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.	
<b>Strand: B. Changes in Matter:</b> Substances can undergo physical or chemical changes to form new substances. Each change involves energy.	
<b>CPI #</b>	<b>Cumulative Progress Indicator (CPI)</b>
<b>Content Statement:</b> The conservation of atoms in chemical reactions leads to the ability to calculate the mass of products and reactants using the mole concept.	
<b>5.2.12.B.3</b> Section #21.3 SE: 763	Balance chemical equations by applying the law of conservation of mass.
<b>Strand: C. Forms of Energy:</b> Knowing the characteristics of familiar forms of energy, including potential and kinetic energy, is useful in coming to the understanding that, for the most part, the natural world can be explained and is predictable.	
<b>CPI #</b>	<b>Cumulative Progress Indicator (CPI)</b>
<b>Content Statement:</b> Heating increases the energy of the atoms composing elements and the molecules or ions composing compounds. As the kinetic energy of the atoms, molecules, or ions increases, the temperature of the matter increases. Heating a pure solid increases the vibrational energy of its atoms, molecules, or ions. When the vibrational energy of the molecules of a pure substance becomes great enough, the solid melts.	
<b>5.2.12.C.2</b> Section #21.2 SE: 757-758	Account for any trends in the melting points and boiling points of various compounds.

<b>5.1.12.D.1</b> <i>Launch Lab 859</i>	Engage in multiple forms of discussion in order to process, make sense of, and learn from others' ideas, observations, and experiences.
<b>Content Statement:</b> Science involves using language, both oral and written, as a tool for making thinking public.	
<b>5.1.12.D.2</b> <i>ChemLab 892</i>	Represent ideas using literal representations, such as graphs, tables, journals, concept maps, and diagrams.
<b>Content Statement:</b> Ensure that instruments and specimens are properly cared for and that animals, when used, are treated humanely, responsibly, and ethically.	
<b>5.1.12.D.3</b> <i>ChemLab 892</i>	Demonstrate how to use scientific tools and instruments and knowledge of how to handle animals with respect for their safety and welfare.

## 2009 New Jersey Curriculum Project

Aligned to the 2009 New Jersey Core Curriculum Content Standards

ENGAGING STUDENTS • FOSTERING ACHIEVEMENT • CULTIVATING 21<sup>ST</sup> CENTURY GLOBAL SKILLS

<p><b>Standard: 5.2 Physical Science:</b> All students will understand that physical science principles, including fundamental ideas about matter, energy, and motion, are powerful conceptual tools for making sense of phenomena in physical, living, and Earth systems science.</p>	
<p><b>Strand: A. Properties of Matter:</b> All objects and substances in the natural world are composed of matter. Matter has two fundamental properties: matter takes up space, and matter has inertia.</p>	
CPI #	Cumulative Progress Indicator (CPI)
<p><b>Content Statement:</b> Electrons, protons, and neutrons are parts of the atom and have measurable properties, including mass and, in the case of protons and electrons, charge. The nuclei of atoms are composed of protons and neutrons. A kind of force that is only evident at nuclear distances holds the particles of the nucleus together against the electrical repulsion between the protons.</p>	
<p><b>5.2.12.A.1</b> Section #24.1, #24.2, #24.3 SE: 862-863, 865-869, 875-876, 878-880</p>	<p>Use atomic models to predict the behaviors of atoms in interactions.</p>
<p><b>Content Statement:</b> In a neutral atom, the positively charged nucleus is surrounded by the same number of negatively charged electrons. Atoms of an element whose nuclei have different numbers of neutrons are called isotopes.</p>	
<p><b>5.2.12.A.4</b> Section #24.1, #24.2, #24.3, #24.4 SE: 861-864, 865-868, 870-874, 877-884, 886-888 <i>ChemLab 892</i> <i>In the Field 891</i></p>	<p>Explain how the properties of isotopes, including half-lives, decay modes, and nuclear resonances, lead to useful applications of isotopes.</p>
<p><b>Strand: D. Energy Transfer and Conservation:</b> The conservation of energy can be demonstrated by keeping track of familiar forms of energy as they are transferred from one object to another.</p>	
<p><b>Content Statement:</b> Nuclear reactions (fission and fusion) convert very small amounts of matter into energy.</p>	
<p><b>5.2.12.D.3</b> Section #24.3 SE: 877-884</p>	<p>Describe the products and potential applications of fission and fusion reactions.</p>
<p><b>Essential Questions:</b></p> <ul style="list-style-type: none"> <li>• Why do some nuclei emit radiation?</li> <li>• What happens when unstable nuclei break apart spontaneously?</li> <li>• How is energy involved in nuclear fission and fusion?</li> <li>• What are the useful applications and harmful effects of nuclear reactions?</li> </ul>
