Read, write, compare, classify and represent real numbers, and use them to solve problems in various contexts.	
<p>8.1.1.1 Classify real numbers as rational or irrational. Know that when a square root of a positive integer is not an integer, then it is irrational. Know that the sum of a rational number and an irrational number is irrational, and the product of a non-zero rational number and an irrational number is irrational.</p> <p><i>For example:</i> Classify the following numbers as whole numbers, integers, rational numbers, irrational numbers, recognizing that some numbers belong in more than one category: $\frac{6}{3}$, $\frac{3}{6}$, $3.\bar{6}$, $\frac{\pi}{2}$, $-\sqrt{4}$, $\sqrt{10}$, -6.7.</p>	<p>Student Edition: P7-P10, 556-560, 574-579, 583-589, 628-633, 634 <i>Algebra Lab</i> 634 <i>Concept Summary</i> 586 <i>Key Concept</i> P9, 583, 586, 628, 629 <i>Study Tip</i> P9, P10, 557, 575, 584, 586 <i>Watch Out!</i> 556, 575, 585</p> <p>Teacher Edition: AE P7-P9, 557, 575-576, 584-586, 629-630; DI 560; FCA 634; FMC 557, 577, 630; SQ 583-584, 628; TNT P8; TT 634; TWT P7</p>

Understand the concept of function in real-world and mathematical situations, and distinguish between linear and non-linear functions.	
<p>8.2.1.1</p> <p>Understand that a function is a relationship between an independent variable and a dependent variable in which the value of the independent variable determines the value of the dependent variable. Use functional notation, such as $f(x)$, to represent such relationships.</p> <p><i>For example:</i> The relationship between the area of a square and the side length can be expressed as $f(x) = x^2$. In this case, $f(5) = 25$, which represents the fact that a square of side length 5 units has area 25 units squared.</p>	<p>Student Edition: 40-46, 47-54, 55, 61, 65-66, 67, 163, 218, 263-270, 425-427, 543-555, 598-604 <i>Concept Summary</i> 49 <i>Graphing Technology Lab</i> 55 <i>Key Concept</i> 47, 163, 265, 543, 545, 598, 599 <i>Review Vocabulary</i> 546 <i>Study Tip</i> 41, 49, 545, 547, 600, 601 <i>Watch Out!</i> 265</p> <p>Teacher Edition: AE 41-42, 48-50, 266, 544-547, 599-600; DI 45, 46; FMC 41, 48; FU 46; SQ 40, 47, 543, 598; TNT 45, 218; TWT 49</p>
<p>8.2.1.2</p> <p>Use linear functions to represent relationships in which changing the input variable by some amount leads to a change in the output variable that is a constant times that amount.</p> <p><i>For example:</i> Uncle Jim gave Emily \$50 on the day she was born and \$25 on each birthday after that. The function $f(x) = 50 + 25x$ represents the amount of money Jim has given after x years. The rate of change is \$25 per year.</p>	<p>Student Edition: 182-188, 189-195, 197-202, 205-206, 208-209, 228-232 <i>Concept Summary</i> 183 <i>Key Concept</i> 189 <i>Preparing for Standardized Tests</i> 208-209 <i>Problem-Solving Tip</i> 184 <i>Study Tip</i> 183, 190, 191, 198, 199</p> <p>Teacher Edition: AE 183-184, 190-192, 198-199, 209, 228; DI 195; FMC 191, 199; SQ 182, 189, 197, 208; TNT 199</p>
