

### The Problem

The rhombus pictured can be divided into two congruent shapes in two ways by the dashed lines in the accompanying figure.

Below are four more figures that can each be divided into two congruent shapes.

Trace each figure and draw lines that will divide the figure into two congruent shapes.

### Strategies and Hints

1. Look for lines of symmetry.
2. Use more than one line to divide the figure.
3. Cut the shapes out of paper and then use scissors to determine parts that are congruent.
