

The Percent Equation (Pages 204–209)

The equation $P = RB$ is called the **percent equation**. In this equation, R is the **rate**. The rate is the decimal form of the percent. Problems involving **simple interest**, which is the amount paid or earned for the use of money, use the formula $I = prt$ or interest = principal \times rate \times time.

Percent Equation	The percentage is equal to the rate times the base. $P = RB$, where P is the percentage, B is the base, and R is the rate.
-------------------------	--

EXAMPLES

- A** 28 is 70% of what number?

$$P = RB \quad \text{Use the percent equation.}$$

$$28 = 0.7B \quad \text{Replace } P \text{ with } 28, R \text{ with } 0.7.$$

$$\frac{28}{0.7} = \frac{0.7B}{0.7} \quad \text{Divide each side by } 0.7.$$

$$40 = B$$

So, 28 is 70% of 40.

- B** How long will it take to earn \$100 if \$1000 is invested at an annual rate of 5%?

$$I = prt$$

$$100 = 1000(0.05)t \quad \text{Replace } I \text{ with } 100, p \text{ with } 1000, \text{ and } r \text{ with } 0.05.$$

$$100 = 50t \quad 1000 \times 0.05 = 50$$

$$2 = t \quad \text{Divide each side by } 50.$$

It will take 2 years to earn \$100 in interest.

PRACTICE

Use the percent equation to find each number.

- Find 70% of 150.
- What number is 60% of 95?
- 60 is 125% of what number?
- Find 8% of 150.
- What number is 65% of 80?
- 14 is 40% of what number?
- 45 is 60% of what number?
- 24 is 30% of what number?
- Banking** How much money should Conrad invest if he wants to earn \$50 in interest after 2 years, in an account that pays 5% annual interest?

- 10. Standardized Test Practice** Josie put \$300 into an account. In 2 years, she earned \$36 in interest. What was the interest rate on the account?

A 4% **B** 5% **C** 6% **D** 8%

Answers: 1. 105 2. 57 3. 48 4. 12 5. 52 6. 35 7. 75 8. 80 9. \$500 10. C
