

### The Problem

The 16 square tiles form a pattern of black and white checks. Rearrange the tiles to form black and white vertical stripes. You may touch only pieces 1 and 2.

### Strategies and Hints

1. If you could move any pieces you wished, how would you change the checks into stripes?
2. The key to this problem is in the last sentence of the directions. Does the problem say that you can't move any pieces other than pieces 1 and 2? Can you think of a way to move pieces without touching them?
