

Chapter 4**REINFORCEMENT**

Use with Section 3

● Metamorphic Rocks and the Rock Cycle

Draw a line between each term on the left and its description on the right.

marble	non-foliated metamorphic rock
metamorphic	consisting of layers of different minerals
foliated	a model of the way rocks change form
non-foliated	pieces of rock deposited by wind, ice, gravity, or water
rock cycle	metamorphic rock having a uniform consistency
sediment	having a changed or different form
gneiss	foliated metamorphic rock

Answer the following questions on the lines provided.

1. What is the rock cycle? _____

2. What is the difference between foliated and non-foliated metamorphic rocks?

3. How are metamorphic rocks formed?

4. Give three examples of foliated metamorphic rocks.

5. Give three examples of non-foliated metamorphic rocks.
