

Chapter 4

Use with Section 1

REINFORCEMENT

● Solids

Match the terms in Column II with the descriptions in Column I by writing the letter of the correct term in the blank at the left.

Column I

- _____ 1. Dust seems to dance around in a beam of sunlight.
- _____ 2. Carbon monoxide is formed when one atom of oxygen combines with one atom of carbon.
- _____ 3. The molecules in a brick are in constant motion.
- _____ 4. Tar is hard to pour because it doesn't flow easily.
- _____ 5. All molecular motion would stop at -273.15°C .
- _____ 6. Energy from hot cocoa melts a marshmallow placed in it.
- _____ 7. Like diamond, soot is made of carbon, but its atoms are arranged in a random manner.
- _____ 8. It takes 17.3 kJ of energy to melt a 100-gram beeswax candle at 62°C .
- _____ 9. The carbon atoms in graphite form clusters with a hexagon shape.
- _____ 10. Table salt changes to a liquid at 808°C .
- _____ 11. Aluminum atoms are arranged in a repeating cubic pattern.
- _____ 12. This sheet of paper is an arrangement of shaking particles.
- _____ 13. A thermometer indirectly measures the average kinetic energy of particles.
- _____ 14. Water changes to ice at 0°C .

Column II

- a. absolute zero
- b. amorphous solid
- c. Brownian motion
- d. crystalline solid
- e. freezing point
- f. heat
- g. heat of fusion
- h. kinetic theory of matter
- i. melting point
- j. molecule
- k. solid
- l. temperature
- m. unit cell
- n. viscosity

Use the graphs below to answer the question that follows.

Graph A

Graph B

15. Which graph shows the melting of a crystalline solid? Explain your reasoning.
