

Chapter 23

Use with Section 3

ENRICHMENT

• Development After Birth

Survey of Height

This exercise will require you to collect some data. It may work best if you work in teams. Once the data is collected, you can work individually to plot the data.

Procedure

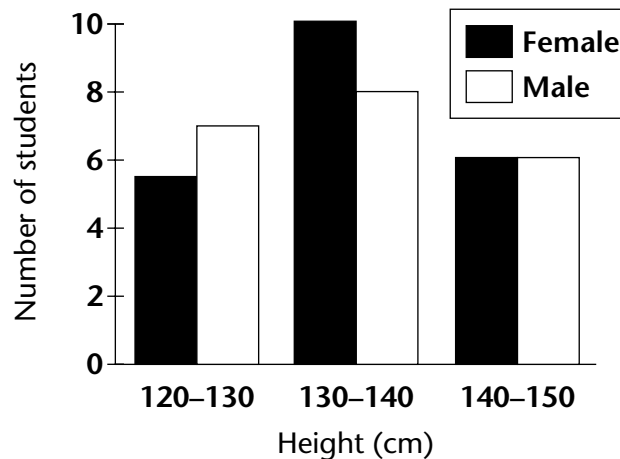

1. Find out the height of all the students in your class. Use a meter tape.
2. Organize your data separately for males and females.
3. Record your data in the table below.

Data and Observations

FEMALES	MALES
Height	Height

Conclude and Apply

1. In the space below, make a bar graph showing the heights of the people in your class. An example is given. Draw the data for males and females in different colors.

2. What can you tell about the height of people in your class from the bar graph? _____

3. Who are generally taller, males or females? _____
