

You have studied linear functions and monomials. Some functions can be defined by the sums of monomials. One function that can be defined this way is a cubic function. A **cubic equation** has the form  $ax^3 + bx^2 + cx + d = 0$ , where  $a \neq 0$ . All cubic equations have at least one but no more than three real roots. You can graph cubic functions using a Casio FX-9750G graphing calculator.

### ACTIVITY

Solve  $x^3 - 6x^2 + 3x + 10 = 0$  by graphing.

Clear the memory before starting. Select MEM from the main menu,  $\blacktriangledown$

Reset  $\boxed{\text{F1}} \boxed{\text{MENU}} 5$ .

**Step 1** Enter the related function in the Graph Func list.

KEYSTROKES:  $\boxed{\text{X},\theta,\text{T}} \boxed{\wedge} 3 \boxed{-} 6 \boxed{\text{X},\text{T},\theta} \boxed{x^2} \boxed{+} 3 \boxed{\text{X},\theta,\text{T}} \boxed{+} 10 \boxed{\text{EXE}}$

**Step 2** Graph the function in the standard viewing window.

KEYSTROKES:  $\boxed{\text{SHIFT}} \boxed{[\text{V-Window}]} \boxed{\text{F3}} \boxed{\text{EXE}} \boxed{\text{F6}}$

**Step 3** Find the zeros of the function by determining where the graph crosses the  $x$ -axis. Notice that this graph crosses the  $x$ -axis three times. Therefore, there are 3 real solutions for the equation.

KEYSTROKES:  $\boxed{\text{SHIFT}} \boxed{[\text{G-Solv}]} \boxed{\text{F1}}$

$[-10, 10]$  scl: 1 by  $[-10, 10]$  scl: 1

One root is  $x = -1$ .

**Step 4** Press  $\blacktriangleright$  to find the second root. Repeat to find the third root.

The solutions for  $x^3 - 6x^2 + 3x + 10 = 0$  are  $x = -1, 2$ , and  $5$ .

### Exercises

Solve each equation by graphing.

1.  $x^3 - 4x^2 - 9x + 36 = 0$

2.  $x^3 - 6x^2 - 6x - 7 = 0$

3.  $x^3 + x^2 + x - 3 = 0$

4.  $x^3 - 5x^2 - 2x + 24 = 0$
