Teacher's Guide to Using the Florida Guide to Daily Intervention

Today it is vital that students understand the mathematics that they are learning. Using computers on the job, making good consumer choices, evaluating information, and other life skills depend upon good mathematics skills. Since no two students are exactly the same, in every classroom there will be students of various abilities and skill levels. This booklet focuses on ways that teachers can intervene to assist the struggling student to improve his or her performance. Helping all students succeed in mathematics and develop their mathematical reasoning skills is an ambitious and worthwhile goal.

In order to ensure students' success, teachers can follow a three-step process of daily intervention.

- 1. Assessment of individual student needs** Teachers need to evaluate the needs of students in order to meet those needs.
- 2. Ongoing evaluation of student progress** Monitoring students' progress and understanding on a daily basis allows a teacher to head off trouble.
- 3. Monitoring instructional activities to strengthen students' weaknesses** Providing opportunities for students to immediately address any weaknesses ensures students' continued success.

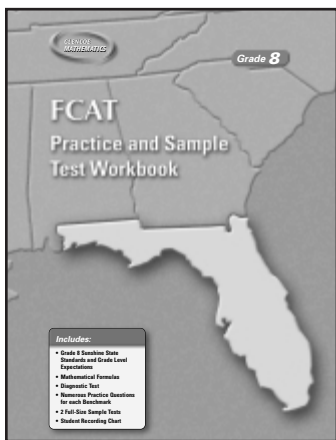

The *Glencoe Pre-Algebra* program includes tools for daily intervention in the Student Edition, the Teacher Wraparound Edition, the Teacher Classroom Resources, the Internet, and other products. Using these tools can help you help your students realize mathematical success. The following pages detail each resource available and the correlation shows how they are used in each lesson of *Glencoe Pre-Algebra*.

Daily Intervention for Florida Students and Teachers

This booklet contains correlations to materials available from Glencoe/McGraw-Hill that can assist you in preparing your students for success on Florida's Comprehensive Assessment Test (FCAT) Grade 8 test, including correlations between every lesson in *Glencoe Pre-Algebra* and the Florida Sunshine State Standards, Grade 8. A list of these standards is included for your convenience.

In addition, this booklet contains correlations between the Florida Student Edition of *Glencoe Pre-Algebra* and the following workbooks:

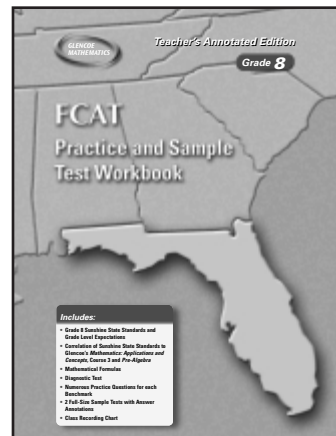

*FCAT Practice and Sample Test
Workbook, Grade 8,
Student Edition*

FCAT Practice and Sample Test Workbook, Grade 8, Student Edition

This workbook includes a diagnostic test and practice for each Florida Sunshine State Standard tested on the FCAT, including multiple choice, gridded response, short response, and extended response. In addition, a sample test is provided in the workbook. Each item in the diagnostic and sample test is also referenced by standard so students can track their proficiency using the student recording chart. This chart allows students to pinpoint standards where they need additional practice. A list of the Sunshine State Standards, Grade 8, is also included.

FCAT Practice and Sample Test Workbook, Grade 8, Teacher's Annotated Edition

In the Teacher's Annotated Edition of the *Glencoe FCAT Practice and Sample Test Workbook, Grade 8*, answers are printed full-size, in place on the student pages of the diagnostic test, practice, and sample test pages. A correlation of the Sunshine State Standards, Grade 8, to *Glencoe Pre-Algebra* is also included. A class recording chart allows you to quickly see on which standards your students need additional practice.

Daily Intervention in the Florida Student Edition

- Every lesson in *Glencoe Pre-Algebra* is correlated to a corresponding **Florida Sunshine State standard, Grade 8**. This allows you to easily see which standards are being addressed as you teach from your textbook.
- In the Getting Started section at the beginning of each chapter in the Florida Student Edition, the **Prerequisite Skills** check students' preparedness for the chapter. You can check prior knowledge by reviewing prerequisite topics and explaining how these prerequisite topics are related to the current concept.
- Additional practice of **Prerequisite Skills** is provided at the end of each lesson with page references to help students review the concepts. These exercises review concepts and skills that will be applied in the next lesson. The Prerequisite Skills section in the Student Handbook in the back of the Florida Student Edition provides explanation and practice of skills that are needed for success in pre-algebra.

- **Extra Practice**, located in the back of the Florida Student Edition, provides additional, immediate practice with the skills and concepts from each lesson.
- **Mixed Problem Solving**, also in the back of the Florida Student Edition, includes numerous verbal problems for students to reinforce their problem-solving skills.

Pre-Algebra Florida Student Edition, p. 724

- You can use the **Check for Understanding** exercises in class to ensure that all students understand the concepts.
- **Concept Check** Students communicate their understanding of the concepts just taught by defining, describing, and explaining mathematical concepts.
- **Guided Practice** These exercises present a representative sample of the exercises in the Practice and Apply section. A key is provided in the Florida Teacher Wraparound Edition that correlates the exercises to the corresponding examples. **Find the Error** exercises help students identify and address common errors before they occur.
- **Application** Students have the opportunity to solve a real-world or mathematical connection problem as a check for understanding.

Daily Intervention in the Teacher Classroom Resources

- The **Study Guide and Intervention** masters found in the Chapter Resource Masters summarize key concepts for each objective and provide practice exercises. These masters are also available as a consumable **Study Guide and Intervention Workbook** in English and Spanish. You may wish to use these masters for additional instruction and practice with individual students, in cooperative groups, or in peer tutoring situations.

Scatter Plots

A scatter plot is a graph that shows the relationship between two sets of data. In a scatter plot two sets of data are plotted as ordered pairs on a coordinate system. A scatter plot may show a positive or negative relationship of the data. The relation may be positive or negative, or there may be no relationship.

Example SCHOOL The table shows Miranda's math quiz scores for the last five weeks. Make a scatter plot of the data.

Since the points are showing an upward trend from left to right, the data suggest a positive relationship.

Week	Score
1	50
2	75
3	65
4	72
5	80

Exercise

FOOD For Exercises 1-5, use the table below which shows the fat grams and calories for several snack foods.

Food	Fat grams per serving	Calories per serving
doughnut	12	200
corn chips	13	250
pudding	3	150
cake	15	280
crunch crackers	6	140
ice cream (light)	5	130
popcorn	2	70

Snack Food Data

Answers: 1. Make a scatter plot of the data in the table. 2. What do the x-coordinates represent? y-coordinates? 3. Is there a relationship between fat and calories? Explain.

5-Minute Check Transparency 1-7

- **5-Minute Check Transparencies with Standardized Test Practice**
For each lesson, there is a full-size transparency with questions covering the previous lesson or chapter. Also included on each transparency is a Standardized Test Practice question. These provide an excellent ongoing opportunity for checking students' understanding of the mathematics they are learning.

- Parents or guardians may need specific advice for helping students make improvements. It may help to engage in frequent correspondence, encourage parental monitoring of homework, and provide parents with a schedule of students' assignments. The **Parent and Student Study Guide Workbook** contains a one-page worksheet for each lesson in the Florida Student Edition and a one-page review for each chapter. This workbook offers an excellent opportunity for students and parents to work together to strengthen weaknesses and develop mathematical understanding.

1-6 Ordered Pairs and Relations

(Pages 33-38)

In mathematics, you can locate a point by using a **coordinate system**. The coordinate system is formed by the intersection of two number lines that meet at their zero points. This point is called the **origin**. The horizontal number line is called the **x-axis** and the vertical number line is called the **y-axis**.

You can graph any point on a coordinate system by using an **ordered pair** of numbers. The first number in the pair is called the **x-coordinate** and the second number is called the **y-coordinate**. The coordinates are your directions to the point.

Example
Graph the ordered pair (4, 3).
• Start at the origin. The x-coordinate is 4. This tells you to go 4 units right of the origin.
• The y-coordinate is 3. This tells you to go 3 units up.
• Draw a dot. You have now graphed the point whose coordinates are (4, 3).

Try These Together
Use the grid below to name the point for each ordered pair.
1. (2, 3) 2. (6, 2)
3. (3, 4) 4. (1, 5) 5. (4, 1)
6. (2, 5) 7. (1, 5) 8. (6, 2)

Exercise
Use the grid at the right to name the point for each ordered pair.
3. (6, 4) 4. (6, 7) 5. (1, 6)
6. (2, 5) 7. (1, 5) 8. (6, 2)

Use the grid to name the ordered pair for each point.
9. R 10. C 11. Q 12. J
13. W 14. P 15. J 16. M

17. **Standardized Test Practice** On the grid above, what would you have to do to the ordered pair for point R to get the ordered pair for point P?
A. Add 6 to the x-coordinate. B. Add 6 to the y-coordinate.
C. Subtract 4 from the x-coordinate. D. Subtract 4 from the y-coordinate.
